

Sixteen-Team Full PPR Draft Board

Who to take in every round, and the plain reason why. Built for this league's exact settings, not generic rankings.

16 TEAMS

FULL PPR

REDRAFT

15 ROUNDS, 240 PICKS

VERIFIED AUG 26, 2026

A. Read this before the draft starts

Six rules. If you remember nothing else, these prevent every big mistake.

- 1 Take the best player on the page, not the position you feel like you need.**
Through round 7, just take whoever is highest on that round's list. Filling holes comes later.
- 2 Do not draft a quarterback before round 5.**
Only 16 quarterbacks start in this league and about 32 get drafted. There will be a good one available late. Every year people panic and take one early, and every year it costs them a starting running back.
- 3 Kicker and defense are your last two picks. Always.**
Rounds 14 and 15, no exceptions. They are close to interchangeable, and a kicker taken in round 11 costs you a real player.
- 4 You only have 6 bench spots, so do not draft backups.**
No second quarterback until very late, no stashing injured players, and no **handcuffs**, meaning the backup to a running back you already own, drafted only in case yours gets hurt. Every bench spot must be somebody who could start for you this season. Every term in this document is defined in section B.
- 5 Catches are points. One catch equals one point.**
A receiver with 100 catches starts the season with 100 points banked before a single yard. When two players look close, take the one who catches more passes. This is the single biggest difference between this league and a normal one.
- 6 Check the injury report the morning of the draft.**
This sheet was verified on Aug 26, but the 53 man roster deadline is Aug 30 and players are being cut, traded and injured every day this week. Five names in wide circulation are already wrong, and they are listed in section I at the end. Two minutes of checking beats a wasted pick.

B. Words you will see in this document

Every term used anywhere below, in plain English. Nothing here assumes you follow the NFL. Read it once and the rest of the document will make sense.

ADP	Average draft position. Where a player usually gets picked. ADP 12.4 means he normally goes around the 12th pick overall. If he is still available well past that number, he is a bargain. It is a price, not a ranking.
PPR	Points per reception. This league is full PPR, so every catch is worth one point on top of the yards. A player who catches 100 passes banks 100 points before anything else happens. Most rankings online assume half a point, which is why they are quietly wrong for this league.
Flex	A starting spot that accepts a running back, a receiver <i>or</i> a tight end. You have one. It means your seventh best skill player still scores for you.
Bench	Players on your roster who are not in your starting lineup this week. You have six spots. They exist so you can swap somebody in when a starter is hurt or has a bad matchup.
Depth chart	The team's own published list of who is first, second and third at each position. First on the depth chart means he plays; third usually means he does not. Teams update these through preseason.
Workhorse	A running back who gets nearly all of his team's carries. The most valuable thing a running back can be, because volume is what produces points.
Committee	The opposite. Two or three backs splitting the work, so none of them gets enough to be reliable. When this document says "avoid, he is in a committee," that is the reason.
Handcuff	The backup to a running back you already own, drafted only in case yours gets hurt. Do not draft any in this league. With six bench spots you cannot afford a player who only has value if something goes wrong.
Waiver wire	The pool of players nobody has drafted, who you can add during the season. In a 16 team league this pool is basically empty, because 240 players are already taken. That is why the draft matters so much more here.
Targets	Passes thrown at a player, caught or not. Target share is the percentage of his team's throws that go to him. A 30% target share is elite. It matters more than catches, because it shows how much the team wants to use him.
Red zone Goal line	The last 20 yards, and the last few yards, before the end zone. The player who gets the ball there scores the touchdowns. A back who does nothing else but take goal line carries can still be worth drafting.
Snaps First-team reps	A snap is one play. First-team reps means practicing with the starters. Both are evidence of what a coach actually plans to do, which is more reliable than what a coach says.

Passing down	A play where a pass is likely, usually third down. Some running backs only play on these, which caps their value in most leagues but not in this one, because catches are points here.
Vacated	Work left behind when a player leaves or gets hurt. Those catches and carries go to somebody, and finding out who before the price moves is where most of the value in this document comes from.
Usable game Bad game	Shorthand used throughout. A usable game means he scored enough to be worth starting. A bad game means he did not. "Only one bad game in 16" is a compliment about reliability , which matters because you set your lineup before the games, not after.
Rookie	A player in his first NFL season. There are no statistics for him at all , so every case rests on where he was drafted, what he is being paid, and what coaches have done with him in practice.
Injured reserve PUP list	Two lists teams put injured players on. Being on either means he is not available right now . Coming off one is good news.
Playoff slate	The three specific games a player's team plays in weeks 15, 16 and 17, which is when your league is decided. "A soft slate" means those three opponents were bad at stopping his position last year. Section E covers this.

HOW TO READ A PLAYER ENTRY

Every recommendation below looks like this:

RB

Player Name TEAM

ADP 12.4

The reason he is worth drafting, in plain English, with the number it rests on in **bold**.

THE RISK: the honest reason he might not work out. **Every sleeper has one of these.** A list of exciting names with no downsides would read as though they are all going to be good, and they are not.

PPR BONUS

STEADY

ROOKIE

The coloured box on the left is his position. The tags at the bottom mean:

- PPR BONUS** he catches a lot of passes, so he gains more than most from this league's scoring. He is worth more here than his price says.
- STEADY** he gave a usable score nearly every week last season. Valuable because you choose your lineup in advance.
- ROOKIE** first NFL season, no statistics exist yet.

A red **Avoid** box at the end of a round names the players who look tempting at that price and should be skipped, with the reason. **Reading those is as valuable as reading the recommendations.**

C. The draft plan, round by round

What to be looking for at each stage, and the one rule that governs it. Follow this and you cannot build a broken roster.

RD	TAKE	THE RULE FOR THIS STAGE
1–2	RB or WR best available	Do not think about need yet. Take the highest player on the list, twice. Aim to come out with one running back and one receiver, but if the board gives you two of the same, take them. No quarterback, no tight end, no kicker.
3	TE fork or RB / WR	The only round where a tight end is worth this price. If McBride or Bowers is there, take him and the position is solved for the season. If both are gone, take a running back or receiver and do not touch tight end again until round 5.
4	RB or WR fill the gap	Now look at what you have. Four lead running backs sit in this round at half the price of round 2. If you went receiver twice early, this is the catch-up round.
5–6	QB opens + TE fallback	First reasonable place for a quarterback. Hurts and Daniels in 5, Mahomes in 6. If you still have no tight end, Fannin, Warren or Pitts in round 5 is your spot. Do not leave round 6 without a plan for both.
7	Last starter flex spot	By the end of this round your nine starting spots should be filled except kicker and defense. Everything from here is bench.
8–10	Bench who could start	Three picks. Each one must be somebody you would be willing to put in your lineup if a starter got hurt. No handcuffs, no second quarterback, no injured stashes. Six bench spots is too few for luxuries.
11–13	Sleepers upside only	The goal changes here. Stop drafting proven-but-limited players and start drafting players whose job could get bigger. Section D is the list. Every name there has a specific stated reason, not a hunch.
14	Defense	Pick any defense playing a weak offense in week 1. They are close to interchangeable and you can change them week to week.
15	Kicker	Any kicker on a good offense. This is the most replaceable position in fantasy football and it goes last, every time.

CHECK YOUR ROSTER AT THESE THREE POINTS

AFTER ROUND 4 4 of 7 You should have four of your seven skill starters, weighted toward running back and receiver. If you have three	AFTER ROUND 7 7 of 7 Quarterback, two running backs, two receivers, tight end and flex all filled. If a spot is still empty here, fill it with your next	AFTER ROUND 13 13 players Seven starters plus six bench. Two picks left, and they are the defense and the kicker. Nothing else.
--	--	---

receivers and no running back, take backs in rounds 5 and 6 and do not wait.	pick regardless of who else is on the board.	
--	---	--

IF THE DRAFT GOES SIDEWAYS

Two things go wrong in every draft. Here is what to do about each.

1 A run happens on a position and you panic.

Somebody takes a quarterback in round 4, then four more go in the next ten picks. Do not join in. There are 32 quarterbacks drafted for 16 starting spots, so the position cannot run out. Kyler Murray was named a week 1 starter and goes in round 9. Let other people spend early picks there.

2 Your position is empty and the good ones are gone.

This only really happens at tight end. If you get to round 8 without one, take Kittle or Kelce there. Both caught more than 55 passes last year and both are sitting at bench prices because of age or missed time. There is no scenario where you need to reach.

D. Sleepers, by position

Players going in round 5 or later whose role is getting bigger. These are the names most people have not heard of, which is exactly why they are cheap. Every one has a specific stated reason, and every one also has the honest risk written next to it.

ROOKIE

means he has never played an NFL regular season game, so there are no statistics to look at. The case rests entirely on draft position, contract, and what coaches have actually done with him in practice.

PPR BONUS

means he gains extra from the one point per catch scoring.

RUNNING BACKS

RB

Chris Rodriguez JAX · Round 10

ADP 157.8

Named a **co-starter** on Jacksonville's first depth chart on Aug 15, which is a real climb because he opened camp on the injury list after foot surgery. The shape of the role is what matters more than the label: he is the **short yardage and goal line back** while the other back handles passing downs. That means he holds the touchdown work in one of the best running offenses in the league.

THE RISK: his value is touchdown dependent rather than volume dependent, so his weeks will swing. The foot surgery is also recent.

Listed as the **number one back** on Arizona's first depth chart, ahead of a rookie taken third overall. He signed a real contract, not a minimum deal, which is how teams signal intent. The number behind him: **19 carries inside the opponent's 20 yard line** on only 16 targets, the most concentrated short yardage workload in the data.

UPDATED AUG 26, AND THIS IS NOW THE BIGGEST UPGRADE ON THE PAGE: the rookie who was supposed to take his job, **Jeremiyah Love, has a high ankle sprain**, will not play again in preseason, and is hoping to be ready for Week 1. Arizona also **released Trey Benson**, so the depth behind Allgeier is a 31 year old James Conner and not much else. **The job is his to start the season and the price has not moved.**

THE RISK: Love is still the third overall pick and takes the job back when healthy. This is a strong start, not a season.

The starter ahead of him strained his groin on Aug 17 and is out two to three weeks, and Allen is **the outright next man up** rather than one of two options. His only competition is a returner and two undrafted rookies. He is also back from a knee injury that cost him most of last season and is reported bigger and stronger.

UPDATED AUG 26: he has backed it up on the field. A 31 yard touchdown run in the first preseason game, two more touchdowns after that, and he **outgained the starter on the same number of carries** in the second game.

THE RISK: the starter is expected back for week 1, so this is insurance rather than a job. It pays off if that groin lingers or recurs.

First round rookie, and the back who would have competed with him **tore his ACL**. He opened camp second on the depth chart, then took the first team rep in the first full scrimmage on Jul 30, and beat reporters now describe the job as increasingly his. His work catching passes has been specifically called out as a standout.

UPDATED AUG 26, AND THIS ONE CUTS AGAINST HIM: the published depth chart still lists him as **the number two back behind George Holani**. Camp reports and the depth chart disagree, which means the job is contested rather than won.

THE RISK: that contradiction, plus lower body soreness in early August. This is the earliest sleeper on the list and the least of a bargain.

23 carries for 85 yards and a touchdown, plus a catch, in the preseason opener. That is an unusually heavy workload for a first exhibition and it means the staff wanted a long look at him. Washington runs the ball a lot and kept the same offensive scheme.

THE RISK: he averaged only 3.7 yards on those carries, so this is a volume signal rather than a production one, and the backfield is still crowded. A lottery ticket with a real reason behind it.

RB **Jonah Coleman** DEN • Round 9 **ROOKIE** ADP 131.2

Camp reports have him trending toward an **every down role** because the back ahead of him struggles in pass protection. Pass protection is the single most common reason a young back gets kept off the field, so a rookie who can do it takes snaps quickly.

THE RISK: camp reports are not a depth chart. Nothing here is confirmed.

RB **Kenneth Gainwell** TB • Round 8 ADP 113.1

73 catches last year, and his new team confirmed in camp that catching passes is the actual job rather than a rotation. He lines up in the backfield and in the slot as the primary safety valve. His coordinator's backs at his previous team totalled 1,435 receiving yards over two seasons.

THE RISK: those 73 catches came with a different team, quarterback and coordinator, so do not assume they transfer whole. His carries are capped by the starter ahead of him.

PPR BONUS

RB **Jonathon Brooks** CAR • Round 8 ADP 113.4

ADDED AUG 26. He has **recovered from two knee surgeries and is running with the first team**, and his head coach has said he and the incumbent will share the job to start the season. The incumbent is also currently injured. His price is climbing fast in drafts right now, so he may be gone earlier than round 8.

THE RISK: two knee surgeries, and it is a committee rather than a job.

RB **MarShawn Lloyd** GB • Round 13+ very late

ADDED AUG 26. Green Bay's starter has a **groin injury** on top of an existing off-field situation, and Lloyd has **locked up the number two job** after staying healthy through the whole preseason. He is going very late or undrafted.

THE RISK: injuries ended each of his first two seasons. That is the entire reason he is free.

WIDE RECEIVERS

WR **Wandale Robinson** TEN • Round 6 ADP 86.6

The best value on this entire page for this scoring format. **92 catches for 1,014 yards** on a 29.8% share of his team's targets, and the market has not raised his price. The competition is thinner than the price implies: one is an unproven rookie and the other averaged 2.4 catches a game last year.

UPDATED AUG 26, AND IT GOT BETTER: he led the team scrimmage with **nine catches**, his quarterback publicly confirmed him as the slot receiver, and **his head coach from his old team is now his offensive coordinator**. That is continuity most players changing teams do not get.

THE RISK: his quarterback has been poor this preseason, 54.2% completions with no touchdowns on 24 attempts. The role is confirmed, the offense around it is not.

PPR BONUS

WR

Josh Downs IND • Round 6

ADP 91.2

Indianapolis traded away the receiver who caught the short and middle passes, and **Downs is built to catch exactly those**. The other receiver on the team plays the outside, so there is no overlap between them. His role goes from part time slot to the main middle of field target.

UPDATED AUG 26: the number behind it is strong. He was targeted on **24% of his routes when he was on the field** last year, so the only thing that was ever missing was snaps.

THE RISK: it depends on the quarterback staying healthy. That same quarterback got hurt last season and the offense collapsed.

WR

Denzel Boston CLE • Round 9

ROOKIE

ADP 131.4

Listed as **Cleveland's number one receiver** on the early depth chart, and his coordinator has said he moves into the first team offense. A rookie handed the top job outright is a completely different asset from a rookie competing for snaps, and his price has not caught up to that.

UPDATED AUG 26: he has held it. He played **with the first unit in both two and three receiver sets** in preseason and has been the talk of camp for his route running and hands. Cleveland also settled its quarterback job, naming Deshaun Watson the Week 1 starter on Aug 24, so the offense around him is at least defined now.

THE RISK: early depth charts are reversible, and Cleveland was a poor offense last year.

WR

Malik Washington MIA • Round 10

ADP 153.2

Miami's **de facto number one receiver in camp** and his quarterback's most targeted option, taking the bulk of first team reps. He had been written off as a short pass specialist, and camp contradicted that directly with a 60 yard catch and a 45 yard catch and run in a single session.

THE RISK: the quarterback is unproven and the offense projects to run the ball. These are preseason reps, not confirmed roles.

WR

Tre Harris LAC • Round 11

ADP 167.5

The third receiver job is **effectively his**, because the veteran ahead of him left and the only competition is a fifth round pick and a rookie. Second round draft capital, and his head coach called him a matchup nightmare, which is role language rather than generic praise.

THE RISK: he is third in line for targets. His 2025 numbers were poor, though he was used mostly as a blocker under a coordinator who has since been fired.

WR

Germie Bernard PIT • Round 13

ROOKIE

ADP 197.0

Second round rookie who **led his offense through the first half of the preseason opener**, working mainly from the slot. That matters because the two established receivers on his team both play outside, so he complements them rather than competing with them. He out-snapped his direct competitor in the slot by more than two to one, and injuries in that receiver room widened the opening.

THE RISK: this is a first exhibition game, which is evaluation rather than confirmation. Essentially free at this price.

WR **Jakobi Lane** BAL · Round 14 **ROOKIE**

ADP 216.0

Third round rookie taking **first team reps as the clear standout of Baltimore's camp**, with red zone chemistry with his quarterback called out specifically, while a veteran ahead of him missed practice. His price moved about 22 spots in seven days on that news alone.

THE RISK: preseason reps before the third week are scheme evaluation, not a role. Cheap enough that it does not matter much if it fails.

WR **Elic Ayomanor** TEN · Round 15

ADP 227.0

Second year receiver running **neck and neck with a first round rookie** for the best performer in camp, consistent on back shoulder throws and deep routes, and a big target over the middle for a young quarterback.

THE RISK: he is contested at the same spot by a player drafted 155 picks earlier, and the quarterback throwing to him has been poor this preseason, 54.2% completions with no touchdowns.

WR **Malik Benson** LV · Round 13 **ROOKIE**

ADP 200.0

Reported as a **top three receiver on his team through six practices** with first team reps and chemistry with the number one draft pick. Pure deep threat, 6 foot 1 and 195 pounds running 4.37, and he caught 11 of 17 targets thrown more than 20 yards last year in college.

THE RISK: the weakest case on this list. Sixth round pick, four different colleges, about two catches a game in college, and the number three job is genuinely not won. A free roll, nothing more.

QUARTERBACKS

QB **Kyler Murray** MIN · Round 9

ADP 142.7

Won the starting job on Aug 12, with the competition sent to the bench and no conditions attached. He took the larger share of first team reps through camp. He was usable in every game he played last year. Getting a confirmed week 1 starter in round 9 is the whole argument for waiting on quarterback.

THE RISK: he is back from a foot injury and his availability record, not his role, is the open question.

QB **Patrick Mahomes** KC · Round 6

ADP 94.9

Cleared for **full camp with no limitations** about eight months after knee surgery, and his coach confirmed full strength returned. He is scrambling without protecting the leg. His short 2025 season was that December injury, not a change in his role.

UPDATED AUG 26: he **has not missed a practice in camp**, but his head coach has stopped short of confirming him for Week 1. Both of those are true at once.

THE RISK: a two ligament reconstruction in his plant leg. Check the morning of the draft.

QB **Caleb Williams** CHI · Round 7

ADP 97.2

Third year is typically when young quarterbacks make their jump, and **his coordinator was kept**, which means he is not learning a new offense for the third time in three years. That continuity is the actual case here.

THE RISK: the leap is expected rather than evidenced. This is a projection.

TIGHT ENDS

There is no real sleeper tier at tight end this year, and that is worth saying plainly rather than inventing one. The position splits into two useful groups and a gap in the middle.

TE **Harold Fannin** CLE · Round 5 ADP 70.6

72 catches as a rookie on a 31% share of his team's targets. Not unknown exactly, but priced two rounds below where that production usually costs. This is the fallback if McBride and Bowers are gone.

PPR BONUS

TE **Juwan Johnson** NO · Round 9 ADP 131.1

77 catches and only 3 bad games in 17. That is starting tight end production sitting at a bench price, and it is the single most overlooked name at the position.

PPR BONUS

STEADY

TE **Dalton Schultz** HOU · Round 9 ADP 131.3

82 catches over a full season, which is more than most tight ends drafted five rounds earlier. Same logic as Johnson above.

PPR BONUS

E. The playoff weeks

Weeks 15, 16 and 17 are when the league is decided, because that is when the playoffs are played. This section rates every recommended player by how hard those three specific games look, which is called his **playoff slate**. Read the rule below before the tables, because it is the part people get wrong.

THE RULE, AND IT HAS ONE EXCEPTION

A December schedule breaks a tie. It never makes a good player bad or a bad player good. If two players are close and you cannot decide, take the one with the better playoff slate. That is the whole use. Never pass on a clearly better player because his week 16 looks hard.

The exception, and it is why this section exists at all: in a normal 12 team league you would mostly ignore this, because if December goes wrong you just pick somebody up. **In a 16 team league with six bench spots there is nobody to pick up.** 240 players are already rostered and the waiver wire is empty from day one. That makes the December schedule much closer to locked at draft time than it would be anywhere else, which is why it is worth a look here and not in most leagues.

BEST PLAYOFF SLATES

Rated out of 9. Three games, each scored 3 for a soft matchup down to 0 for a hard one, against what each opponent's defense gave up to that position last season.

SCORE	PLAYER	WEEK 15	WEEK 16	WEEK 17
8	Wandale Robinson WR TEN · R6	IND soft	LV good	PIT soft
8	Carnell Tate WR TEN · R5	IND soft	LV good	PIT soft
8	Elic Ayomanor WR TEN · R15	IND soft	LV good	PIT soft
8	Kyler Murray QB MIN · R9	DET good	WAS soft	NYJ soft
8	Jauan Jennings WR MIN · R9	DET soft	WAS soft	NYJ good
8	Denzel Boston · KC Concepcion WR CLE · R9	NYG good	BAL soft	IND soft
7	Jonathan Taylor RB IND · R1	TEN good	CIN soft	CLE good
7	Brock Bowers TE LV · R3	DEN good	TEN good	ARI soft
7	Kyle Pitts TE ATL · R5	WAS soft	TB soft	NO even
7	Chris Rodriguez RB JAX · R10	HOU even	DAL soft	WAS soft
6	Tyler Allgeier RB ARI · R10	NYJ soft	NO even	LV good
6	Bijan Robinson RB ATL · R1	WAS soft	TB good	NO even
6	Travis Etienne RB NO · R3	TB good	ARI soft	ATL even

The thing worth noticing: three Tennessee receivers hold the best slate in the whole pool, and two of them are already recommended for other reasons. **Wandale Robinson was the best value on this board before the schedule was checked, and the schedule agrees.** That is what a tiebreaker looks like when it points the same way as everything else.

HARDEST PLAYOFF SLATES

None of these are reasons to avoid a player. They are reasons to prefer somebody else when the choice is close, and reasons to plan a backup at that position.

SCORE	PLAYER	WEEK 15	WEEK 16	WEEK 17
0	George Kittle TE SF · R8	LAC hard	KC hard	PHI hard
2	Jalen Hurts QB PHI · R5	SEA hard	HOU hard	SF good
2	Kenneth Walker RB KC · R2	NE hard	SF good	LAC hard
2	Sam LaPorta TE DET · R6	MIN hard	NYG even	CHI even
2	Garrett Wilson WR NYJ · R2	ARI even	NE even	MIN hard
2	Kaytron Allen RB WAS · R11	ATL even	MIN even	JAX hard
2	Evan Engram TE DEN · R15	LV hard	BUF hard	NE good

SCORE	PLAYER	WEEK 15	WEEK 16	WEEK 17
3	Kayshon Boutte WR HOU · R11	JAX even	PHI hard	GB good
3	Jonathon Brooks RB CAR · R8	CIN soft	PIT hard	SEA hard

George Kittle is the one worth acting on. A hard matchup in all three playoff weeks is the worst slate in the entire pool, and he is the only player who draws one. He is still a good tight end and still worth his price. But if you are choosing between him and Travis Kelce four picks later, the schedule says take Kelce.

TWO HONEST LIMITS ON THIS SECTION

This is the least reliable information in the whole document, and it is not close. The ratings use what each defense gave up last season, held constant. Defenses change coordinators, lose starters and get better or worse, and none of that is in here. Treat it as a nudge, never as a fact.

This assumes the playoffs are weeks 15, 16 and 17, which is the standard Yahoo setup. Confirm that in the league settings before leaning on any of it. If the league runs weeks 14 to 16 instead, this whole section points at the wrong games.

F. Three things that make this league different

LEAGUE SIZE 16 teams 240 players get drafted. In a normal 12-team league that number is 180. Sixty extra players come off the board, so the waiver wire will be empty from day one. There is no fixing a bad draft here.	SCORING Full PPR One point per catch, not a half point. Pass catching running backs and high volume receivers are worth more here than any ranking list you find online, because most lists assume half.	BENCH 6 spots Nine starters and only six on the bench. That is very tight. Every bench pick should be a player who could realistically start for you, not a lottery ticket.
---	---	--

G. The rounds

1 ANCHOR THE ROSTER

Picks 1–16

Take a running back who catches passes, or one of the three receivers with over 115 catches. Do not overthink this round. The players here are the safest on the board and you will not find this kind of volume again.

RB	Bijan Robinson ATL	ADP 1.6
	Gets nearly every carry in Atlanta and caught 79 passes last year. A running back who catches that much is the most valuable thing in this format. Nobody on his team takes his work away.	
	PPR BONUS	STEADY
RB	Jahmyr Gibbs DET	ADP 1.9
	Splits carries with a teammate but keeps all the passing down work, 77 catches . In this scoring the catches more than cover the shared carries.	
	PPR BONUS	STEADY
WR	Ja'Marr Chase CIN	ADP 3.1
	125 catches and the largest share of his team's throws of any receiver in football. Highest ceiling on the board. Slightly streakier week to week than Nacua below.	
	PPR BONUS	
WR	Puka Nacua LAR	ADP 4.5
	129 catches in 16 games , the most of anyone here. That is 129 points before a single yard. He also gave a usable score in 15 of those 16 games, which is the steadiest profile in the round.	
	UPDATED AUG 26: he has a groin injury and was still out of practice on Aug 25. Reported as not serious, and he is still a first round pick in every format, but check that he is practicing before the draft.	
	PPR BONUS	STEADY
RB	Jonathan Taylor IND	ADP 7.2
	His numbers last year look worse than he was. His quarterback got hurt midseason and the whole offense sank with the backup. The workload is not in question.	
WR	Amon-Ra St. Brown DET	ADP 8.8
	117 catches and he is on the field for 85% of snaps. Very difficult for him to give you a zero.	
	PPR BONUS	STEADY
RB	James Cook BUF	ADP 9.9
	Lead back in one of the highest scoring offenses in football behind a top three offensive line. Last season reads like his floor, not his ceiling.	
RB	Saquon Barkley PHI	ADP 14.0
	True workhorse, and with A.J. Brown gone to New England there are more passes to go around for him.	
RB	De'Von Achane MIA	ADP 14.8
	67 catches , and the only back in the first two rounds who was usable in every single game with zero bad weeks. If you want the safest pick available late in round 1, this is it.	
	PPR BONUS	STEADY

CAREFUL IN ROUND 1

Ashton Jeanty (LV) has a **sprained ankle**, confirmed Aug 25 as not long term, but his Week 1 availability is genuinely uncertain. Ankle sprains take one to six weeks. Fine to draft, but know you may be starting the season without him.

Christian McCaffrey (SF) caught 102 passes and had zero bad games, but his injury history is a real risk rather than a small one. Fine if you accept that trade.

Jaxon Smith-Njigba (SEA) had a huge year built on deep throws that do not repeat reliably. Priced like a top five pick, riskier than that price suggests.

Rashee Rice (KC) is coming back from a knee injury and played only 8 games. Reports were positive in early August, but this is a bet, not a safe pick.

2 TAKE THE OTHER ONE

Picks 17–32

If you took a running back in round 1, take a receiver here, or the other way round. Still no quarterback, still no tight end unless it is one of the two in round 3.

RB **Omarion Hampton** LAC

ADP 18.7

Second year back with real evidence behind the hype: four games as a rookie above 75% of snaps, and over **80% of his team's carries inside the 5 yard line** when he was on the field. That is where touchdowns come from.

RB **Derrick Henry** BAL

ADP 19.1

Has beaten the age question every year so far. Baltimore runs the ball a lot and he is the goal line back, which is the touchdown job.

RB **Kenneth Walker** KC

ADP 20.3

Signed a large contract in Kansas City, which is the clearest signal a team can send about who gets the ball. Mahomes returning adds passing game value on top.

WR **Drake London** ATL

ADP 17.0

68 catches in only 12 games, which is a full season pace above 95. Clear number one option in Atlanta.

PPR BONUS

WR **Chris Olave** NO

ADP 31.5

100 catches and only one bad game in 16. For a full point per catch league he is underpriced at the end of round 2, and this is one of the clearest values on the whole board.

PPR BONUS

STEADY

WR **George Pickens** DAL

ADP 22.3

93 catches across a full 17 game season. Durable and productive.

PPR BONUS

WR **Zay Flowers** BAL

ADP 24.8

86 catches and played all 17 games. The main target in a good offense.

PPR BONUS

WR **Garrett Wilson** NYJ

ADP 31.0

Took **33.7% of his team's targets**, the highest rate of anyone in this round, and did it through one of the worst passing offenses of the last five years. Only played 7 games, which is why he is cheap.

RB **Jeremiyah Love** ARI

ADP 26.6

Rookie who started the preseason opener with the first team, took about 75% of the snaps over the first three drives, and got all 14 first half touches. Teams do not do that by accident.

UPDATED AUG 26, AND THIS CHANGES THE PICK: he suffered a **high ankle sprain in that same game**, will not play again in the preseason, and Arizona is hoping to have him back for Week 1 roughly four weeks out. High ankle sprains are slow and they linger. **He is no longer a round 2 pick.** If he falls several rounds he is worth taking, but do not spend a top 30 selection on a rookie who has not practiced.

AVOID IN ROUND 2

Josh Jacobs (GB) has a legal situation from June 2026 that creates real risk he misses games. Not worth it at this price.

Kyren Williams (LAR) is the starter but not a true every down back, and the price assumes he is.

3 THE TIGHT END DECISION

Picks 33–48

This is the one round with a real strategic fork. Two tight ends here are worth taking early because 16 teams have to start one and there are not 16 good ones. If you pass on both, do not take a tight end until round 5.

TE **Trey McBride** ARI

ADP 41.9

126 catches from a tight end. That is receiver volume at a position where most starters catch half as many. In a 16 team league this is the single biggest edge available on the whole board, because the person who ends up with the 16th best tight end gets almost nothing.

PPR BONUS

STEADY

TE **Brock Bowers** LV

ADP 43.4

64 catches in only 12 games. The other tight end worth taking this early. If McBride is gone, take him rather than waiting.

PPR BONUS

WR **Tee Higgins** CIN

ADP 34.5

Scored the same per game as George Pickens last year but costs a full round later, in the second highest scoring offense in the league.

WR Malik Nabers NYG ADP 34.2

In his 4 games before getting hurt he took a **higher share of his team's targets than Justin Jefferson or Ja'Marr Chase**. Tiny sample, but that is a real signal about how his team uses him.

RB Travis Etienne NO ADP 41.5

Lead back in New Orleans, and as of Aug 23 the notes say his workload just got wider, not narrower.

RB Cam Skattebo NYG ADP 42.3

In his healthy games he owned **100% of his team's carries inside the 10 yard line**. That is the touchdown job.

UPDATED AUG 26: he is returning from a severe ankle injury that ended his rookie season, and he is now **sharing the top of the depth chart with Tyrone Tracy** rather than owning it outright. Still real upside if fully healthy, but this is no longer a clean workload bet.

RB Javonte Williams DAL ADP 35.7

Re-signed as the clear lead back. Dallas has a poor defense, which sounds bad but is good for his fantasy value, because trailing teams throw and score more.

WR Jaylen Waddle DEN ADP 47.3

Has been efficient for years while stuck behind Tyreek Hill taking the first look. Now he is the first look.

WR Emeka Egbuka TB ADP 48.0

Moving to his natural position under a new coordinator. Last season he was played out of position, which suppressed the numbers.

AVOID IN ROUND 3

Breece Hall (NYJ) is still talented but the notes flag growing risk that he shares the job, and the price does not account for it.

4 LEAD BACKS, CHEAPER

Picks 49–64

A cluster of backs here have the full job on their own team at half the price of round 2. If you went receiver heavy early, this is where you catch up at running back.

RB Quinshon Judkins CLE ADP 54.7

The competition for his job resolved and he is locked in as the lead back with a full workload path.

UPDATED AUG 26: he is coming back from a **dislocated ankle and fractured fibula** suffered in December. Reports say the recovery is progressing well, but confirm he is practicing before you draft him.

RB David Montgomery HOU ADP 55.8

Signed specifically to be the number one back and the team traded assets to get him, which confirms the intent. Age 29 is the only real flag.

RB TreVeyon Henderson NE ADP 56.4

The long term answer in an offense that is clearly improving around a young quarterback. The back ahead of him is on his way out.

RB Bucky Irving TB ADP 50.1

Lead back, but be aware he shares the goal line and passing down work, so his touchdown upside is capped compared to the three above.

WR Courtland Sutton DEN ADP 59.3

74 catches over a full season as the main target in Denver.

PPR BONUS

WR DK Metcalf PIT ADP 62.8

59 catches with only 2 bad games in 15. Reliable rather than spectacular, which is what you want in a starting spot.

STEADY

AVOID IN ROUND 4

D'Andre Swift (CHI) has no lead role, he is in a committee. The price says otherwise.

Alec Pierce (IND) has not practiced at all this summer. Do not draft a player who has not been on the field.

5 QUARTERBACK WINDOW OPENS

Picks 65–80

First round where taking a quarterback is reasonable. Note that rushing touchdowns are worth 6 points here and passing touchdowns only 4, so quarterbacks who run are worth more than usual. This is also the fallback spot for a tight end if you passed on the two in round 3.

QB Jalen Hurts PHI ADP 76.2

Runs for touchdowns, and touchdowns on the ground are worth **6 points here against 4 for passing**. That scoring gap is worth real points across a season, and he was usable in 88% of his games.

STEADY

QB Jayden Daniels WAS ADP 72.7

Same reasoning as Hurts, he runs enough to matter. Only played 7 games last season, which is the risk.

TE Harold Fannin CLE ADP 70.6

72 catches as a rookie on a 31% share of his team's targets. If you missed McBride and Bowers, take your tight end here and stop worrying about it.

PPR BONUS

TE **Tyler Warren** IND ADP 70.0

76 catches across a full season. Same tier as Fannin for this purpose.

PPR BONUS

TE **Kyle Pitts** ATL ADP 74.1

88 catches, the most of the three tight ends in this round, and he played all 17 games.

PPR BONUS

RB **Jaylen Warren** PIT ADP 75.2

Catches passes out of the backfield and had **zero bad games in 16**. Exactly the profile that gains most from full point per catch scoring.

PPR BONUS

STEADY

WR **Parker Washington** JAX ADP 66.5

Broke out last year with 65 catches for 954 yards, including **19 catches of 20 yards or more**. Growing chemistry with his quarterback.

RB **Jadarian Price** SEA ADP 66.5

First round rookie, the back ahead of him tore his ACL, and he won the camp competition outright after starting behind.

WR **Carnell Tate** TEN ADP 77.1

First round rookie with the top receiver job already confirmed.

AVOID IN ROUND 5

Tony Pollard (TEN) is 31 and his team has shifted to throwing the ball.

Chuba Hubbard (CAR) averaged 3.8 yards per carry and lost his starting job last season. Two players are competing with him.

Rhamondre Stevenson (NE) is losing his job to Henderson, who is listed above at a similar price.

6 WHERE THE VALUE IS

Picks 81-96

The best value round on the whole board for this scoring. Three receivers here caught 85 or more passes last year and are priced as if they caught 50.

WR **Wandale Robinson** TEN ADP 86.6

92 catches for 1,014 yards on a 29.8% share of his team's targets, and the market has not raised his price to match. In a full point per catch league this is the best value on this page.

PPR BONUS

WR Michael Pittman Jr PIT ADP 80.8

Scored like the 26th best receiver last year and is being drafted as the 48th. You are paying for the gap between those two numbers.

WR Stefon Diggs WAS ADP 96.0

85 catches across a full 17 game season, available at the end of round 6.

PPR BONUS

WR Josh Downs IND ADP 91.2

Pittman leaving Indianapolis frees up exactly the short and middle targets Downs is built to catch, and the other receiver there plays a different role so they do not compete.

QB Patrick Mahomes KC ADP 94.9

Cleared for full camp with no limitations after knee surgery, and his coach confirmed full strength. Getting him in round 6 is the reward for waiting on quarterback.

TE Sam LaPorta DET ADP 90.9

40 catches in only 9 games, on the field for 91% of snaps when healthy.

UPDATED AUG 26: he picked up a **hip injury in camp** and his Week 1 status is unclear. Do not make him your only tight end.

AVOID IN ROUND 6

Rico Dowdle (PIT) was added to a committee and now threatens Jaylen Warren's work rather than owning his own.

RJ Harvey (DEN) is limited to passing downs because of pass protection problems, and 3.7 yards per carry confirms the ceiling.

Jakobi Meyers (JAX) catches a lot of short passes with no red zone role. High floor, almost no touchdowns.

7 FILL THE LAST STARTING SPOT

Picks 97–112

By the end of this round you should have your quarterback, two running backs, two receivers, a tight end and a flex. Everything after this is bench.

QB Justin Herbert LAC ADP 105.5

Was usable in **94% of his games** last year, one of the steadiest quarterbacks available. Boring is good at this position.

STEADY

QB Caleb Williams CHI ADP 97.2

Third year is when quarterbacks usually take their jump, and his coordinator was kept, which means no relearning the offense.

TE	Dallas Goedert PHI	ADP 104.7
	60 catches. The last tight end in the reliable tier before the position gets thin.	
TE	Tucker Kraft GB	ADP 97.5
	Usable in half his games at a position where that is above average.	
WR	Xavier Worthy KC	ADP 100.8
	Catching passes from Mahomes, which raises the ceiling on any receiver. Inconsistent week to week, so this is a bench pick rather than a starter.	

AVOID IN ROUND 7

Ricky Pearsall (SF) is OUT FOR THE 2026 SEASON. Season ending surgery, on injured reserve since Aug 1. He is still being drafted here by people who have not checked. Do not be one of them.

JK Dobbins (DEN) has had two major knee surgeries.

Aaron Jones (MIN) is in a committee and only has value if the other back gets hurt.

Khalil Shakir (BUF) catches short passes with no red zone role, so there is a floor but no ceiling.

8 BENCH BEGINS

Picks 113–128

Six bench picks left, and each one should be a player who could start for you if someone gets hurt. No handcuffs, no backup quarterbacks yet.

RB	Kenneth Gainwell TB	ADP 113.1
	73 catches from a running back. That is a receiver's catch total, and his team confirmed in camp that catching passes is his actual job rather than a rotation. In this scoring he is worth far more than round 8.	
	PPR BONUS	
TE	George Kittle SF	ADP 117.4
	57 catches in only 11 games , which is a top five tight end pace. He is available this late because he tore his Achilles at the end of last season.	
	UPDATED AUG 26: good news. He has been activated off the physically-unable-to-perform list, is ahead of schedule and is on track for Week 1 . The price has not caught up to that.	
	PPR BONUS	
TE	Travis Kelce KC	ADP 124.8
	76 catches in a full season. Older, but still the volume of a starting tight end at a bench price.	
	PPR BONUS	

RB MarShawn Lloyd GB

late

ADDED AUG 26. Green Bay's starter has a **groin injury** on top of an existing legal situation, and Lloyd has **locked up the number two job** after staying healthy all preseason. He is being drafted very late, if at all.
THE RISK: injuries ended each of his first two seasons. That is the entire reason he is cheap.

RB Zach Charbonnet SEA

ADP 127.3

Usable in over half his games as a secondary back, which is unusual and useful.

AVOID IN ROUND 8

Aaron Rodgers (PIT) turns 42 this season and two younger players could take his job if he starts slowly.

Rachaad White (WAS) and **Jacory Croskey-Merritt (WAS)** are both in a four way committee that his own team calls loaded. Nobody there can be trusted.

9 THE DEEPEST ROUND

Picks 129-144

More players are priced in this range than any other, which means more mistakes by other people and more chances for you. Tight ends with real catch totals are still here.

QB Kyler Murray MIN

ADP 142.7

Named the Week 1 starter on Aug 12 with the competition sent to the bench and no conditions attached. He was usable in every game he played last year. If you skipped quarterback entirely, take him here.

STEADY

TE Dalton Schultz HOU

ADP 131.3

82 catches over a full season. That is more than most tight ends drafted five rounds earlier.

PPR BONUS

TE Juwan Johnson NO

ADP 131.1

77 catches and only 3 bad games in 17. A genuine starting tight end at a bench price.

PPR BONUS

STEADY

WR Jauan Jennings MIN

ADP 131.7

55 catches and usable in over half his games, which is strong for a receiver this late.

RB Braelon Allen NYJ

ADP 141.0

Clear path to the second back job rather than a muddled committee. If the starter misses time he steps into real volume.

RB **Jonah Coleman** DEN

ADP 131.2

Camp reports have him trending toward an every down role while the player ahead of him struggles in pass protection.

WR **KC Concepcion** CLE

ADP 130.0

First round rookie walking into a large set of vacated targets in Cleveland.

AVOID IN ROUND 9

Jayden Higgins (HOU) is OUT FOR THE 2026 SEASON with a torn ACL as of Aug 23. Another one still being drafted by people working off old lists.

Woody Marks (HOU) and **Dylan Sampson (CLE)** are both committee backs on poor offenses with capped upside.

10 VOLUME AT A DISCOUNT

Picks 145–160

Still taking players who could start. Two tight ends here caught over 45 passes, and a couple of backs have paths to real work.

TE **Jake Ferguson** DAL

ADP 146.1

82 catches across a full season. The same catch total as tight ends going in round 9, one round later.

PPR BONUS

RB **Alvin Kamara** NO

ADP 154.0

33 catches and usable in over a third of his games. Name value has faded but the receiving role has not fully gone.

RB **Chris Rodriguez** JAX

ADP 157.8

Named a **co-starter** on the first official depth chart after opening camp on the injury list. That is a real climb, not a rumour.

TE **Brenton Strange** JAX

ADP 159.5

46 catches and usable in a third of his games. Fine as a second tight end or a bye week fill.

WR **Travis Hunter** JAX

ADP 159.3

28 catches in limited work. Upside pick rather than a producer, but the talent is real.

WR **Malik Washington** MIA

ADP 153.2

Upgraded on Aug 15 after being written off earlier in the summer.

AVOID IN ROUND 10

Tyjae Spears (TEN) has been injury prone, hit a career low in carries last season, and has no clear role coming.

11 REAL PATHS, SMALL PRICES

Picks 161–176

From here the goal changes. You are looking for players whose job could get bigger, not players who are already good. Each of these has a specific reason the role could grow.

WR **Kayshon Boutte** HOU

ADP 170.0

TRADED AUG 24. He is **no longer on New England, he is a Houston Texan.** Most lists have not updated this. The trade happened specifically because Houston lost Jayden Higgins for the season, so Boutte walks into a vacated starting job opposite Nico Collins rather than the crowded room he left. He caught 33 passes for 551 yards and 6 touchdowns last year and ranked **fifth in the NFL in yards per catch.**

THE RISK: brand new offense with days to learn it, and he is competing with Jaylin Noel, Xavier Hutchinson and Tank Dell for the vacated targets.

RB **Kaytron Allen** WAS

ADP 171.0

23 carries in the preseason opener plus a catch. That is an unusually heavy workload for a debut and it means the staff wanted an extended look.

RB **Nicholas Singleton** TEN

ADP 167.0

The offense needs a back who catches passes, that is his profile, and the players competing with him are beatable.

WR **Tre Harris** LAC

ADP 167.5

The third receiver job is effectively his after a departure, with almost nobody competing for it.

QB **Daniel Jones** IND

ADP 166.0

Usable in **92% of his games.** Only worth a pick if you want a second quarterback, and in a 6 bench league you probably do not.

AVOID IN ROUND 11

Kimani Vidal (LAC) is third in a three deep group behind a healthy starter and a free agent signing.

12 LOTTERY TICKETS WITH HISTORY

Picks 177–192

Two picks left before you should start thinking about kicker and defense. Spend them on players who have actually produced before, not unknowns.

WR Tyreek Hill FA ADP 177.0
21 catches in only 4 games, and **zero bad games** among them. A proven player at a price that assumes he is finished. Check where he signs before drafting him.

PPR BONUS

WR Troy Franklin DEN ADP 189.0
65 catches last year, which is more than several receivers going a hundred picks earlier.

PPR BONUS

QB Jacoby Brissett ARI ADP 180.0
The contract holdout that made everyone avoid him is over. Usable in 86% of his games.

AVOID IN ROUND 12

Sean Tucker (TB) only scores if he gets a goal line carry. Touchdown or nothing is not a bench spot worth using.

Eli Stowers (PHI) is third on his own depth chart as of Aug 2.

13 LAST REAL PLAYER

Picks 193–208

The final skill position pick. After this, kicker and defense. Take the player with the clearest described role rather than the biggest name.

TE David Njoku LAC ADP 201.0
Signed cheaply and had a strong camp with separation and mismatches noted. Good second tight end if you want insurance.

WR Germie Bernard PIT ADP 197.0
Second round rookie who led his offense through the first half of the preseason opener, working from the slot, which is a spot the team's two established receivers do not occupy.

RB Jonathon Brooks CAR ADP 113.4
ADDED AUG 26. He has **recovered from two knee surgeries and is running with the first team**, and his head coach has said he and the incumbent will split the job to start the season. His price is climbing fast, so he may be gone before round 13. Take him wherever you see him.
THE RISK: two knee surgeries is two knee surgeries, and it is a committee, not a job.

TE AJ Barner SEA ADP 195.0
52 catches last year at pick 195.

WR Malik Benson LV ADP 200.0
Reported as a top three receiver on his team through six practices, taking first team reps.

14 DEFENSE

Picks 209–224

Take a defense here. Pick any defense facing a weak offense in week 1, they are close to interchangeable and you can swap them week to week. If you would rather grab one more player first, these are the ones worth it.

WR **Jakobi Lane** BAL

ADP 216.0

Third round rookie taking **first team reps** as the standout of Baltimore's camp, with red zone chemistry with his quarterback specifically called out while a veteran ahead of him missed practice.

RB **Justice Hill** BAL

ADP 216.0

21 catches out of the backfield, which is worth something in this format even in a small role.

RB **Emari Demercado** KC

ADP 215.9

Signed as a pure passing down back in Kansas City. Narrow role, but the catches are the points here.

AVOID IN ROUND 14

Christian Kirk (SF) is 30 and fourth in line on his own team, with a second round rookie pushing him further down.

Jaylin Noel (HOU) had his role improve but the situation around it did not.

15 KICKER

Picks 225–240

Last pick, take a kicker. Any kicker on a good offense works, they are the most replaceable position in fantasy football. If for some reason you already have one, these are the best remaining players.

TE **Evan Engram** DEN

ADP 237.0

50 catches at the very last pick of the draft.

TE **Mason Taylor** NYJ

ADP 230.0

44 catches on an 18% share of his team's targets.

WR **Keon Coleman** BUF

ADP 233.0

38 catches in a good offense.

WR **Elic Ayomanor** TEN

ADP 227.0

41 catches on an 18% target share, usable in a fifth of his games.

AVOID IN ROUND 15

Shedeur Sanders (CLE) lost the job. Cleveland named Deshaun Watson their Week 1 starter on Aug 24. Sanders is the backup. Do not draft him.

Jaydon Blue (DAL) has no defined role.

H. Quick view by position

For when you know what you need and want to see the options in one place. Round shown is roughly where each player goes.

RD	RUNNING BACK	RD	WIDE RECEIVER
1	Bijan Robinson, Jahmyr Gibbs, Jonathan Taylor, James Cook, Saquon Barkley, De'Von Achane	1	Ja'Marr Chase, Puka Nacua, Amon-Ra St. Brown
2	Omarion Hampton, Derrick Henry, Kenneth Walker, Jeremiah Love	2	Drake London, George Pickens, Zay Flowers, Garrett Wilson, Chris Olave
3	Travis Etienne, Cam Skattebo, Javonte Williams	3	Tee Higgins, Malik Nabers, Jaylen Waddle, Emeka Egbuka
4	Quinshon Judkins, David Montgomery, TreVeyon Henderson, Bucky Irving	4	Courtland Sutton, DK Metcalf
5	Jaylen Warren, Jadarian Price	5	Parker Washington, Carnell Tate
6	—	6	Wandale Robinson, Michael Pittman Jr, Stefon Diggs, Josh Downs
8	Kenneth Gainwell, Jonathon Brooks, Zach Charbonnet, MarShawn Lloyd	7	Xavier Worthy
9	Braelon Allen, Jonah Coleman	9	Jauan Jennings, KC Concepcion
10	Alvin Kamara, Chris Rodriguez	10	Travis Hunter, Malik Washington
11	Kaytron Allen, Nicholas Singleton	11	Kayshon Boutte (now HOU), Tre Harris
13+	Justice Hill, Emari Demercado	12+	Tyreek Hill, Troy Franklin, Germie Bernard, Malik Benson, Jakobi Lane

RD	TIGHT END	RD	QUARTERBACK
3	Trey McBride, Brock Bowers — the two worth taking early	5	Jalen Hurts, Jayden Daniels
5	Harold Fannin, Tyler Warren, Kyle Pitts — the fallback tier	6	Patrick Mahomes
6–7	Sam LaPorta, Dallas Goedert, Tucker Kraft	7	Justin Herbert, Caleb Williams
8–9	George Kittle, Travis Kelce, Dalton Schultz, Juwan Johnson	9	Kyler Murray
10+	Jake Ferguson, Brenton Strange, David Njoku, AJ Barner, Evan Engram, Mason Taylor	11+	Daniel Jones, Jacoby Brissett

I. If you remember five things

1 One catch equals one point, so take the player who catches more.

Most rankings online assume half a point. They are quietly wrong for this league, and the gap is largest at running back.

2 Quarterback in round 5 or later, never earlier.

Mahomes was available in round 6 and Kyler Murray in round 9. That is what waiting buys you.

3 Tight end is either round 3 or round 5, not in between.

Take McBride or Bowers early, or wait for Fannin, Warren or Pitts. The middle is where you overpay.

4 Kicker and defense with your last two picks.

Nothing else. This is the most common way beginners lose value and it is completely avoidable.

5 Check the roster before every pick, because other people's lists are wrong right now.

Ricky Pearsall

and

Jayden Higgins

are out for the 2026 season.

Trey Benson

was released by Arizona.

James Conner

is third string.

Kayshon Boutte

plays for Houston now, not New England. All five are still sitting at normal prices on lists that have not been updated. The 53 man deadline is Aug 30, so expect more of this.

WHERE THESE NUMBERS COME FROM

Draft prices are Yahoo redraft average draft position, refreshed Aug 15, 2026 from 2,429 real drafts held between Aug 10 and Aug 15. Prices move, so treat anything within a round as noise rather than a precise ranking.

Roles, injuries, trades and depth charts were re-verified against live reporting on Aug 26, 2026. Every entry marked "Updated Aug 26" or "Added Aug 26" reflects that pass. Two players were removed outright: James Conner, who is third on Arizona's depth chart, and Trey Benson, who Arizona released.

Catch totals, target shares and weekly consistency are measured from the 2025 season. A player's 2025 numbers describe what happened, not a guarantee of what will happen, and rookies have no 2025 numbers at all, so their entries lean on reported camp and preseason usage instead.

 **The 53 man roster deadline is Aug 30, 2026 at 6pm Eastern, and cuts are happening right now.** Depth charts will move between this document and any draft held after that date. Check the injury report and your league's player list on the morning of the draft. That is not a formality this week, it is the single highest value thing you can do.

One honest caveat about the prices. The source market is half point per catch, and this league is full point. That difference is deliberate rather than an error, and it is exactly where the value comes from: players who catch a lot of

passes are priced below what they are worth here. The ones marked **PPR BONUS** are where that gap is largest.
